C++

Snippet from [Wikipedia: C++](#)

C++ is a high-level, general-purpose programming language created by Danish computer scientist Bjarne Stroustrup. First released in 1985 as an extension of the C programming language, adding object-oriented (OOP) features, it has since expanded significantly over time adding more OOP and other features; as of 1997/C++98 standardization, C++ has added functional features, in addition to facilities for low-level memory manipulation for systems like microcomputers or to make operating systems like Linux or Windows, and even later came features like generic programming (through the use of templates). C++ is usually implemented as a compiled language, and many vendors provide C++ compilers, including the Free Software Foundation, LLVM, Microsoft, Intel, Embarcadero, Oracle, and IBM.

C++ was designed with systems programming and embedded, resource-constrained software and large systems in mind, with performance, efficiency, and flexibility of use as its design highlights. C++ has also been found useful in many other contexts, with key strengths being software infrastructure and resource-constrained applications, including desktop applications, video games, servers (e.g., e-commerce, web search, or databases), and performance-critical applications (e.g., telephone switches or space probes).

C++ is standardized by the International Organization for Standardization (ISO), with the latest standard version ratified and published by ISO in October 2024 as *ISO/IEC 14882:2024* (informally known as C++23). The C++ programming language was initially standardized in 1998 as *ISO/IEC 14882:1998*, which was then amended by the C++03, C++11, C++14, C++17, and C++20 standards. The next C++23 standard superseded these with new features and an enlarged standard library. Before the initial standardization in 1998, C++ was developed by Stroustrup at Bell Labs since 1979 as an extension of the C language; he wanted an efficient and flexible language similar to C that also provided high-level features for program organization. Since 2012, C++ has been on a three-year release schedule with C++29 as the next planned standard.

Enums and Structs

- Enumerations
- Structs
- Class Templates & CTAD

Arrays, Vectors, and Algorithms

- Dynamic Arrays (std::vector)
- Fixed-size Arrays (std::array)
- Legacy Arrays
- Iterators & Algorithms

Advanced Functions & Templates

- Function Overloading
- Function Templates
- Advanced Pointers
- Lambdas

Object-Oriented Programming: Classes

- Class Basics
- Constructors
- The hidden 'this' pointer
- Destructors
- Friends & Statics

Operator Overloading

- Overloading Methods
- Common Operators
- Advanced Overloading
- Copying

Object Relationships

- Composition
- Aggregation
- Association & Dependencies
- Container Classes

Inheritance & Virtual Functions

- Inheritance
- Multiple Inheritance
- Polymorphism
- Interfaces
- Dynamic Casting

Advanced Templates

- [Class Templates](#)
- [Non-type Parameters](#)
- [Template Specialization](#)

Exceptions

- [Try, Catch, Throw](#)
- [Exception Classes](#)
- [Exception Specifications](#)

Move Semantics & Smart Pointers
